Tie Rod Combination Wrench  
Part No. 012021

## **Instructions Tie Rod Combination Wrench**

### **Overview:**

Thank you for purchasing our Tie Rod Combination Wrench. The idea behind its conception was to provide a tool that worked both on the 46mm spanner used on the more forgiving or "stock" 911 tie rods, and the 930 style that requires a thin 32mm open end.

### **Use:**

When using the spanner end, use as you would any other wrench. When tightening tie rod ends with the 32mm open end, **do not over torque**. Torque should be limited to the factory spec of 35 ft-lbs and use a drop of blue Locktite®.
