WEVO 915 Transmission Bearing
Retainer Plate Part No. 331050

WEVO 915 Transmission Bearing Retainer Plate

Stock plates

WEVO plate

The WEVO Bearing Retainer is a logical addition to any 915 transmission upgrade.

The thrust loads from the Pinion gear and the helical cut ratio gears are accommodated by the bearing retainer plate. The Original Equipment uses two separate steel retainers that offer little to support or harness the pair of bearings.

Our Windrush version is made from an aerospace stainless steel alloy that has thermal expansion properties more closely matched to the aluminum or magnesium final drive casing. The Bearing Retainer captures the two thrust bearings together - accurately maintaining the designed shaft spacing and mimicking the packaging in the 930 transmission and G-50 transmissions.

The Bearing Retainer is designed and machined for minimum weight - being lighter than the two Original Equipment pieces and saves almost 1/2 pound over other less expensive aftermarket bearing retaining plates.

Suits all 915 transmissions 1972 through 1986
